

EXPERIMENT-02

Code:

```
#include <stdio.h>

void binarySearch(int arr[], int n, int key)
{
    int low = 0;
    int high = n - 1;
    while (low <= high)
    {
        int mid = (low + high) / 2;

        if (arr[mid] == key)
        {
            printf("Element found at %d", mid);
            break;
        }
        else if (arr[mid] < key)
        {
            low = mid + 1;
        }
        else
        {
            high = mid - 1;
        }
    }
}

void main()
{
    int arr[] = {10, 20, 30, 40, 50, 60, 70};
    int n = 7;
    int key;

    printf("Enter element to search: ");
    scanf("%d", &key);

    binarySearch(arr, n, key);
}
```

Output:

```
Enter element to search: 30
Element found at 2
